Election/Restrictions

This application contains claims directed to the following patentably distinct species: (1) a method for scanning a surface having the step of "adjusting at least part of the optical system so as to vary a spacing of the non-overlapping viewing regions read by the optical system" (claim 5, step (a)), (2) a method for scanning a surface having the step of "simultaneously reading from a first viewing region of the surface and a second viewing region of the surface so as to generate a first image of at least part of said first viewing region and a second image of at least part of said second viewing region, said first viewing region and said second viewing region being spaced substantially by a first integer multiple of said vector of periodicity, an area of said first viewing region being a minority of an area of the pattern, an area of said second viewing region being a minority of said area of the pattern" (claim 8, step (a)), and (3) a method for scanning a surface having the step of "positioning the optical arrangement and the sample in relation to each other, such that, the translation vector is aligned substantially parallel to the first vector of periodicity" (claim 10, step (a)).

The species are independent or distinct because each of the patentably distinct species having at least a method step which is not required by the other species.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Claims 1-4 will be examined along with the species (1), if elected.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Phan whose telephone number is (571) 272-2317. The examiner can normally be reached on Monday-Friday.
